

Patient Information

Our Consultation Process Document

Prior to your initial consultation, you will be asked to complete a new patient information and medical history questionnaire.

The first step in your consultation with us is to discuss your dental concerns and treatment desires.

Following this discussion and a review of your medical questionnaire, we will undertake a comprehensive examination.

Your examination will include:

- A soft tissue assessment both inside and outside the mouth.
- An assessment of your jaw joint.
- A Complete tooth charting and record.
- A Panoramic radiograph
- Intra-oral radiographs
- Intraoral photographs
- Diagnostic study models

The most important part of the consultation process is the discussion of your treatment options and the construction of a treatment plan to attend to your needs.

This plan will outline the treatment procedures, a schedule of the appointments required and an estimate of fees for the course of treatment.

This process of evaluation and planning will allow you as a patient to make an informed decision related to your treatment.
